We have constructed the hydraulic Pile-Driver to ensure improved performance and simpler operation in the installation of crash-barrier posts.

The efficiency of the hydraulic system and the ease of use make of it an essential tool for anyone working in the road-sign sector. When mounted on a truck bed, in stowed position, the hydraulic Pile-Driver fits completely inside the profile of the vehicle, for easier transport; the total width of about 80 cm allows maximum use of the load surface for transporting goods.

The hydraulic system provides:

- 1) adjustment of distance from truck
- 2) ramp inclination
- 3) side shift
- 4) verticality adjustment on slopes
- 5) lifting of Pile-Driver hammer
- 6) operation of Pile-Driver hammer
- 7) use of auxiliary hydraulic tools

Fit your truck with an Hydraulic Pile-Driver; you will find it efficient, extremely reliable and very inexpensive to run.
